

• UAE OWNED • UAE BUILT • LICENSED UNDER THE GCGRA

The whole
stack. Owned
here.

ADGT owns and develops the proprietary technology behind regulated digital infrastructure, data and payments – **cage, kiosk, wallet, switch and ledger**. Not licensed in from a vendor. Not stitched together from four of them. Proudly the only full-stack provider in the market, and proudly the UAE's.

FUNDS NEVER LEAVE SUPERVISION

FIVE STAGES • ONE LEDGER

Everyone else rents the stack. We own it.

In gaming payments the kiosk belongs to one company, the wallet to another, the switch to a third and the compliance platform to a fourth – and the operator pays all four to almost talk to each other. ADGT owns every layer: issuing, acquiring, switching, wallet, cage, kiosk and the ledger underneath. One company, one licence, one record.

01 / Fund

MONEY ENTERS ONCE

Domestic transfer, UAE-issued card, international card, or a licensed virtual-asset on-ramp. Provenance is established at the door, not reconstructed afterwards.

02 / Verify

IDENTITY SETTLES UP FRONT

UAE Pass for residents, document capture and biometric liveness for visitors. Sanctions and PEP screening resolve before a wallet opens – so the queue happens once, at enrolment, and never again at cash-out.

03 / Hold

FUNDS SIT APART

Player balances are held segregated with a UAE bank, off the operator's balance sheet. Reconciliation is continuous rather than end-of-day.

04 / Play

ONE BALANCE, WHOLE PROPERTY

The same wallet spends at a slot, a table, the book, the restaurant and the front desk. Integrated at the management-system layer, so the operator adds no new counter.

05 / Redeem

OUT IS AS CLEAN AS IN

Cash at an ADGT kiosk, or straight back to the funding account. Both routes write the same record to the same ledger, timestamped and available to the regulator.

00 / Ledger

ONE RECORD, NOT FIVE

Cage, kiosk, wallet, floor and book report into one system. Operators, auditors and the GCCRA read the same numbers, at the same time, without a reconciliation exercise in between.

Two proven stacks. Four founding partners. One UAE company.

ADGT did not start from a blank page – and it did not start from someone else's roadmap either. It brought the two most proven technology stacks in gaming payments under one roof, with the capital and the mandate to make them Emirati. The technology is owned outright, developed here, and answerable to a UAE regulator.

Technology

NRT TECHNOLOGY

The hardware and operations layer – kiosks, cage systems and CHS. Over 12,000 machines in service and licences in more than 150 jurisdictions, brought in as founding technology rather than rented as a vendor product.

Technology

SIGHTLINE PAYMENTS

The cashless and wallet layer – the technology that took the first casino floors in the United States fully cashless, and the only one live across every major casino management system.

Founding partner

RAYA HOLDING

Abu Dhabi principal capital, and the mandate that decided this: build the company in the UAE and own the technology, rather than import it and licence it back.

Founding partner

BLACKSTONE

Institutional capital and governance at board level, holding the business to the standard its scale requires from the first day rather than the fifth year.

Every other provider in this market is assembling someone else's parts. **We own ours, and we own them here.**

The cage, rebuilt as a kiosk.

Software is where the corridor is governed. Hardware is where a guest actually meets it – and a guest's opinion of the whole property is formed in the ninety seconds they stand at a machine. So the machine is ours.

FLAGSHIP	NEO – cash handling and payment kiosk. 22-inch touch, 29.5 × 87 × 29.25 inches
RANGE	QuickJack V6 and QuickPay2 for constrained footprints, QuickCashier for the cage, the QuickTouch series for loyalty and enrolment
GUIDANCE	iLite – programmable lighting on every key component, lifting the exact part the guest needs next: reader, PIN pad, dispenser, coin cup, receipt
ACCEPTANCE	EMV chip and contactless, NFC and RFID, mobile wallet, 2D barcode, ticket in / ticket out
CASH	Note recycling with cassette docking, coin dispense, bill breaking, four programmable cassettes with lockable reject bin, spill-guarded internals
TERMINAL SECURITY	First in the industry to put TPM encryption on an ATM card reader and to tokenise card transactions at an ATM. Full-disk encryption, locked-down OS, UL 291 Level 1 safe
APPROVALS	GLI approved, PCI compliant, ADA / ADAAG, CAN/CSA B651.1-01, UK Design Guidelines 2002
ESTATE	CHS – live health, cash position and over 300 real-time alerts across every unit, from a console or a phone
FINISH	Custom colours and logo illumination specified to the property – the kiosk should look like it was built for that floor, because it was

A new market gets one chance at a clean record.

ADGT was built to the standard the UAE intends to be held to – not the standard the industry has settled for elsewhere. Compliance sits in the architecture, not in a quarterly report about it.

Licence

GCGRA

Operating within the General Commercial Gaming Regulatory Authority framework, with reporting built into the transaction path rather than assembled after it.

Jurisdiction

ADGM

Incorporated in Abu Dhabi Global Market. Data residency and governing law stay in the UAE.

Card data

PCI-DSS

Segmented card-data environment, tokenised at the point of capture. Sensitive data does not travel further than it must.

Financial crime

AML AND CTF

Screening, monitoring and suspicious-activity reporting under UAE federal law, applied at the corridor rather than at each counter.

Player protection

LIMITS THAT HOLD

Deposit and spend limits, cooling-off and self-exclusion enforced at the wallet – so they apply across the whole property at once, not per machine.

Continuity

THE FLOOR STAYS OPEN

Redundant switching and settlement paths. A payments outage is a gaming outage, and the floor does not get to have one.
